Comments:

I live just off Grafton Center and experience the cell phone issues. However, due to the known dangers inherent with this technology I CAN NOT support this cell tower placement. The symptoms people experience in areas with towers are tinnitus, headache, fatigue, aching joints, sore muscles among many other health issues. I have not brought any documentation to this letter as I heard about this meeting just recently and do not have time. There are a lot of microwaves generated and radiation as well. People please do 10 minutes of research into these towers and health effects caused by them. And a pediatrician next door! That is awful to consider.

If I have a call to place that I can't afford to have dropped, I go to the Cumberland Farms in the center and make or accept my call there. I see many people in their cars on the phone there, so I think this is a known solution. Landlines have become very inexpensive so that is an option as well.

In addition to the cell towers we know about in the area, there are 2 GWEN towers, one on Browns Rd and one off Milford Rd. These towers are adding their microwaves, various but especially low frequencies, and radiation to the soup we already have going.

Protect the people of Grafton and do not place these in residential areas, if anywhere at all in town.
